Installing Sage ACT! Premium (access via web)

You can install Sage ACT! Premium on a web server and access all of your contact information via the Internet from any machine with Internet Explorer® or Firefox® installed.

Sage ACT! Premium Web Server

You can set this up in several ways; this diagram shows a simple web configuration.
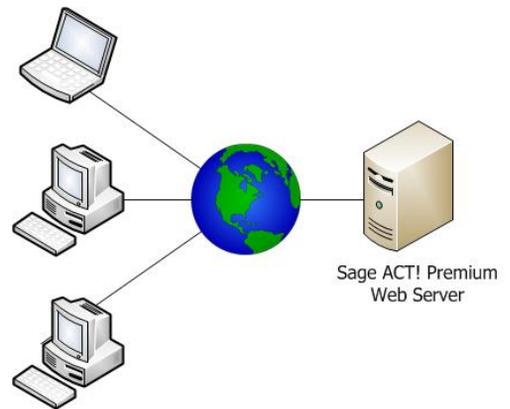

How to download and install

1. Review the web server system requirements: http://www.act.com/2012systreq.

2. Click the Download button on http://www.act.com/download/premium2012. It's easiest to download to the machine you will install on; in this case, your web server.

    The files are downloaded to the default download location on your machine, then extracted. The installation panel appears.

3. Make sure you have completed the prerequisites for installing the web version of Sage ACT! Premium on your web server. See Keys to a Successful Deployment and the Sage ACT! Premium Web Administrators Guide.

4. Install the product on your web server. If you download both the web version and the Windows® version of Sage ACT! Premium, you must install them on separate machines.
